

16. [4] Draw out how Mergesort would sort this list:

24	16	9	10	8	7	20
----	----	---	----	---	---	----

7	8	9	10	16	20	24
---	---	---	----	----	----	----

- 1) 1st split the array up.
- 2) then split the smaller groups in this case of ~~the~~ twos
- 3) then check each two's group (starting with the left till it gets back together) to see if element (0) < (1) if not swap
- 4) then do the same to the right side (9, 10)
- 5) then merge 16, 24 and 9, 10 together in order
- 6) then repeat steps 2-4 on [8, 7, 20]
- 7) then merge [9 | 10 | 16 | 24] and [7 | 8 | 20] together least to greatest!
